

VIB - Reinigungsbox - VIB Nr. 01-5277

Wichtige Daten im Überblick

Type	Cleaning machines
Location	ab Standplatz der Maschine
Coolant	Öl
Control	-
VIB-Nr	01-5277

Description

The cleaning box is ideal for blowing off your parts before they are measured and packed by hand. Instead of blowing the dirt adhering to the parts into the environment with the "air gun", everything remains in the closed blow-off area.

Because the cleaning box can be connected to your extraction system, whether centralised or decentralised, the ambient air also remains as clean as possible from unpleasant cooling lubricant vapours.

Chips and the blown off cooling lubricant are collected in a drawer and can be disposed of easily.

The air flow is triggered either by foot switch or automatically by a light cabinet. This means that the operator always has one hand free at the machine and can already prepare the next work step, be it measuring or packing.

This ensures clean air and environment at the workplace.

Contact us, we will be happy to demonstrate the possible applications of our cleaning box in your company.
